

## **INTRODUCING THE LATEST IN RETINAL IMAGING THE EIDON**

We are proud to introduce the latest in retinal imaging, the EIDON. This amazing tool which we can now offer you, lets us check the health of your eyes. This instrument will enhance our ability to detect the effects associated with disease such as diabetes, hypertension and high cholesterol. With the imaging of your retina to the outer periphery, which was not available with traditional cameras, we can see early signs related to glaucoma and most especially, macular degeneration.

In order to detect signs of impending issues before they become sight threatening, using this amazing tool is the best way to actively monitor your eyes.

**This test can be performed instead of dilation in most patients and only takes seconds to perform.**

The co-pay with or without insurance is \$39.
